Snake Bench

The design has evolved through many projects, and has become popular in public spaces. Simple lines, extremely stable, and flexibility of use make this bench a design feature in many applications.

Made out of Galvanized steel, which can either be powder coated or left to patinate.

We either use Oak slats, or recycled teak. Where a galvanized finish is required we only use Teak, otherwise Oak is a good choice.

Benches can be made in any size or diameter. The slats are 30mm thick and usually 120-130mm wide

The snake bench can be used also as free standing benches or in groups. Below you see the benches as 1 unit, with a stainless steel pool inserted into the centre.

Lighting is also an option worth considering as these LED lights are maintenance free, and simple to install giving you interesting effects.

Frocester Bench

This bench can be adapted to fit most applications, and can be constructed as an inward or outer curving seat. These benches you see are situated in St Georges Hospital London, and are fitted with FSC Cumura.

Toolbox Bench

Ideal for those that want tools or cushions close to hand. Water tight and long enough for most garden tools, this bench is big enough for most people's needs.

Made from Galvanized steel, which can be powder coated with a color of your choice, and available with Oak or recycled teak slats.

Handle's fitted at either end for easy transportation.
